The Crises of “Our Common Home”

Are your investments aligned with your principles?

NEARING A TIPPING POINT

GLOBAL FREEDOM AND FUNDAMENTAL RIGHTS ARE FACING DIRE THREATS

Authoritarianism is Expanding Across the Globe

The share of the world’s population living in a less free world is growing as authoritarian regimes wield more power and proliferate authoritarian approaches to governance

8 in 10 people live in a **partly free or not free** country¹

In Full View: The Fragility of Liberal Democracy

Internal enemy forces exploiting their very own governing systems continue to distort facts and national politics. Public faith is void; replaced with hatred, violence, and fear mongering

Coups were more **common in 2021** than in the previous 10 years²

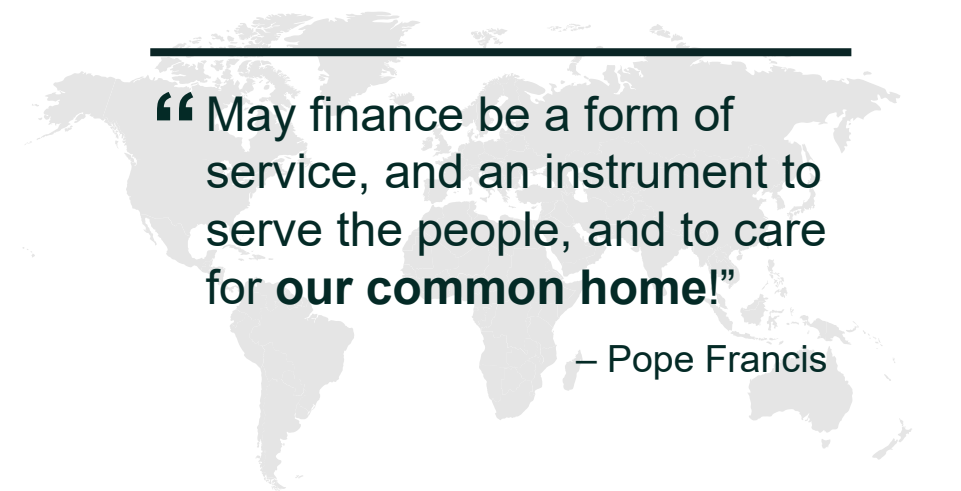

AGAINST THE CATHOLIC CATECHISMS

“The **death penalty** is inadmissible because it is an attack on the inviolability and dignity of the person.”³

Over **70%** of the world’s countries have **abolished the death penalty** in law or practice⁴

“**Corruption** [is the] process of death that feeds the culture of death. Because the thirst for power knows no limits.”⁵

\$1.26 Trillion every year – The **cost of corruption** in developing countries⁶

“May finance be a form of service, and an instrument to serve the people, and to care for our common home!”

– Pope Francis

Sources: Encyclical Letter, “On Care for our Common Home, Pope Francis, 2015 talked about social values, teachings and environmental principles, which Catholics could use to inform how they invested their money. 1) The Global Expansion of Authoritarian Rule, 2021. 2) The Global State of Democracy, 2021. 3) L’Osservatore Romano Meeting, 2017. 4) Death Penalty Information Center, 2022. 5) Quote from Pope Francis in February Pope Video, 2018. 6) World Economic Forum, 2019.

ESG + Ethics = Ethical Finance*

Mitigated Volatility

Portfolio volatility may be reduced as countries with deteriorating fundamentals are excluded from the portfolio

Participate in the performance of Emerging Market Sovereign Debt that abides by Catholic Principles in one simple ETF

*Nummus.info presentation, 2022

The on-going charges are the fees the fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations. All charges will be paid out by the Fund, which will impact on the overall return of the Fund.

For Professional Client Use Only. Not for distribution to Retail Clients.

Integrate ethics and purpose-driven values in your investing standards

Overview

Adopting investment guidelines and impact objectives that align with Catholic Principles

Unite civil responsibilities and ethics towards society, environment, and governance – to help advance an economy that isn't strictly focused on the pursuit of profit

Investment management requires fair and clear conduct and not corruption

What are Catholic Principles?

- Insistence on government's moral integrity
- Adherence to issues of social justice
- Abolition of the death penalty
- Care for the planet

ESG + Ethics

Ethics in Investments

Case study: the principles at work

Death penalty

Excluded: China

The Chinese government is the world's leading executioner. Since 2005, China ranks #1 in *Countries with the most confirmed executions**

*Source: Amnesty International, 2019

Corruption

Excluded: Iraq, Nigeria

Arguably the greatest hindrance to sustainable development - and one of the leading causes of poverty and underdevelopment. Condemned by the Church repeatedly over the centuries because it harms the collective good.

Political rights & freedom Civil liberty

Excluded: Russia

While Russia is no longer included in broad EM indexes, including the parent index of this ETF, in December 2021 screenings for EMCV, Russian securities were excluded from the index due to low scores on Political Rights, Civil Liberties, and Political Freedom

A broader opportunity set with Emerging Market Debt

Higher yield potential when compared to developed markets

- Despite historically low yields among developed market bonds, opportunities for income still abound in emerging market bonds.
- Many emerging market countries have low debt-to-GDP ratios while still providing higher yields than their developed market counterparts.

Enhanced portfolio diversification

- Emerging market bonds have had relatively low correlations to equities when compared to traditional asset classes and may help enhance overall portfolio diversification.
- Exposure to euro and U.S. dollar denominated government bonds issued by emerging market countries can be a source of favorable returns and potential diversification.

All charges will be paid out by the Fund, which will impact on the overall return of the Fund.

Further information in relation to the sustainability-related aspects of the Fund can be found at www.franklintempleton.co.uk/our-funds/etf. Please review all of the fund’s objectives and characteristics before investing.

Uniting responsibilities and principles in the portfolio

The approach

A combination of values-based exclusions and a strict screening process identify the investable universe of the Fund's benchmark index

Catholic Principles

- Many value such principles and want their investments to adhere and align with Catholic values
- Ethical finance is a core tenet for them
- Care for the earth (our common home) and its environment is a central principle

Values-based exclusions

- Countries are assessed based on eligibility criteria and specific values-based standards
- Countries with deteriorating fundamentals that practice activities inconsistent with Catholic principles are eliminated
- Countries which practice the death penalty and considered "not free" are first to be eliminated

Simple and stringent screening process

- Countries must meet certain criteria, which apply a yes/no answer for inclusion
- Certain thresholds and scores must be met for inclusion in the index
- Countries must pass ALL screens and criteria to be included

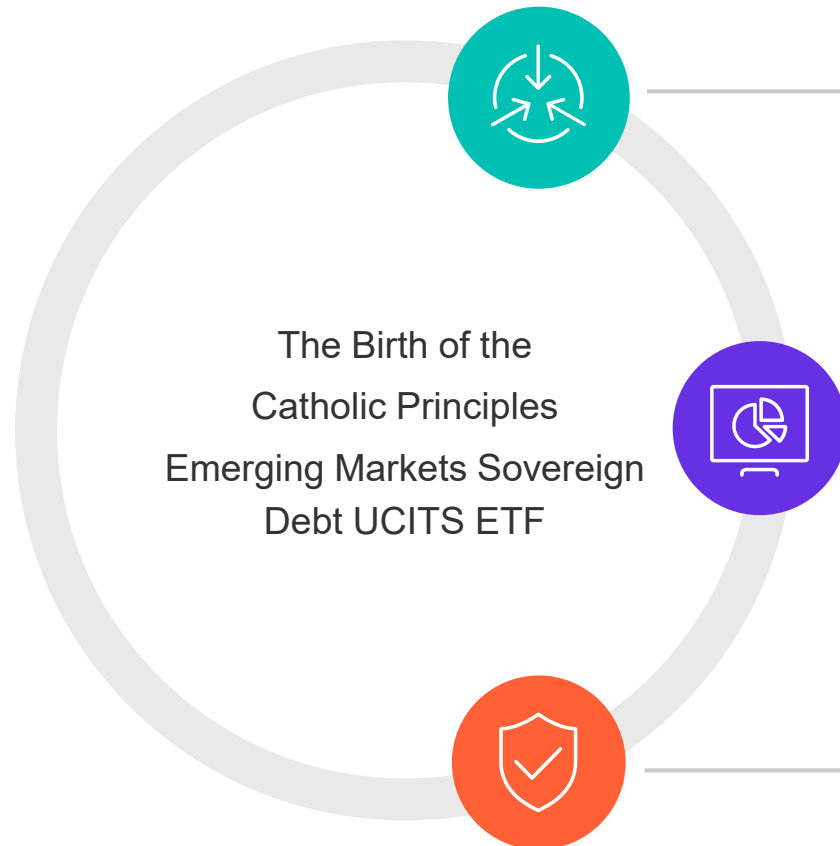

Environmental impact

- Investors gain exposure to countries working towards sustainability and carbon reduction
- Investors express a commitment to having positive environmental impacts

Ethics in investments

Real customisation to clients backed by the scale and resources of Franklin Templeton

Nummus.info

- Ethical advisor and an evolving research center for ethical and sustainable finance
- Certification process that screens investments that ensures compliance with catholic principles
- Conforms to the Catholic Values as defined by the Italian Episcopal Conference (CEI)

ICE

- Created a custom-made index for our client
- Leading index provider with global presence
- Strong capabilities in fixed income pricing and data

Franklin Templeton

- A Collaborate with establish partners to create a tailor-made solution our client was asking for

ICE Catholic Principles ESG Emerging Markets External Sovereign Index

Universe

ICE Catholic Principles ESG Emerging Markets External Sovereign Index (EMCV)
Comprised of Emerging Market Sovereign bonds denominated in EUR and USD

Starting Investment Universe

Parent Index

ICE BofA Diversified Emerging Markets External Debt Sovereign Bond Index (EMGD)

Exclusions

Catholic principles screens are applied. Screens are based on the ethical criteria of social justice, environmental responsibility and good governance approved by Nummus.Info according to CEI Guidelines.

Exclusions

- Retentionist countries (practice death penalty)
- Countries considered “not free”
- Countries and their bonds are excluded based on their scores on several ethical, social, and governance criteria
- Bonds from countries with a sovereign credit rating of less than B3 based on the average of Moody’s, S&P and Fitch

Weighting

- Debt issue capitalization
- Applies a 10% cap on countries
- Countries are reweighted, if necessary, such that the index has an overall Carbon emissions score at least 30% less than that of the Parent index

Maintenance

- Index is revised monthly to ensure the eligibility of countries are meeting the screening requirements

What are the key risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments. The Fund intends to track the performance of the Index which is comprised of debt securities in emerging market countries selected from the Parent Index. Such assets have historically been subject to price movements due to such factors as general market volatility, changes in the financial outlook or fluctuations in currency markets. As a result, the performance of the Fund can fluctuate over time. Other significant risks include: Counterparty risk: the risk of failure of financial institutions or agents (when serving as a counterparty to financial contracts) to perform their obligations, whether due to insolvency, bankruptcy or other causes. Credit risk: the risk of loss arising from default that may occur if an issuer fails to make principal or interest payments when due. This risk is higher if the Fund holds low-rated, sub-investment grade securities. Derivative Instruments risk: the risk of loss in an instrument where a small change in the value of the underlying investment may have a larger impact on the value of such instrument. Derivatives may involve additional liquidity, credit and counterparty risks. Emerging markets risk: the risk related to investing in countries that have less developed political, economic, legal, and regulatory systems, and that may be impacted by political/economic instability, lack of liquidity or transparency, or safekeeping issues. Foreign Currency risk: the risk of loss arising from exchange-rate fluctuations or due to exchange control regulations. Index related risk: the risk that quantitative techniques used in creating the Index the Fund seeks to track do not generate the intended result, or that the portfolio of the Fund deviates from its Index composition or performance. Secondary market trading risk: the risk that the shares purchased on the secondary market cannot usually be sold directly back to the Fund and that investors may therefore pay more than the NAV per share when buying shares or may receive less than the current NAV per Share when selling shares. Sovereign risk: the risk that the value of securities issued by governments or by agencies may be affected by the creditworthiness of the relevant government, including any default or potential default by the relevant government. For a full discussion of all the risks applicable to this Fund, please refer to the “RiskConsiderations” section of the current prospectus of Franklin Templeton ICAV.

| Non-Investment Grade | 37,77 | 37,91 | -0,14 |
| Cash & Cash Equivalents | 1,91 | 0,00 | 1,91 |

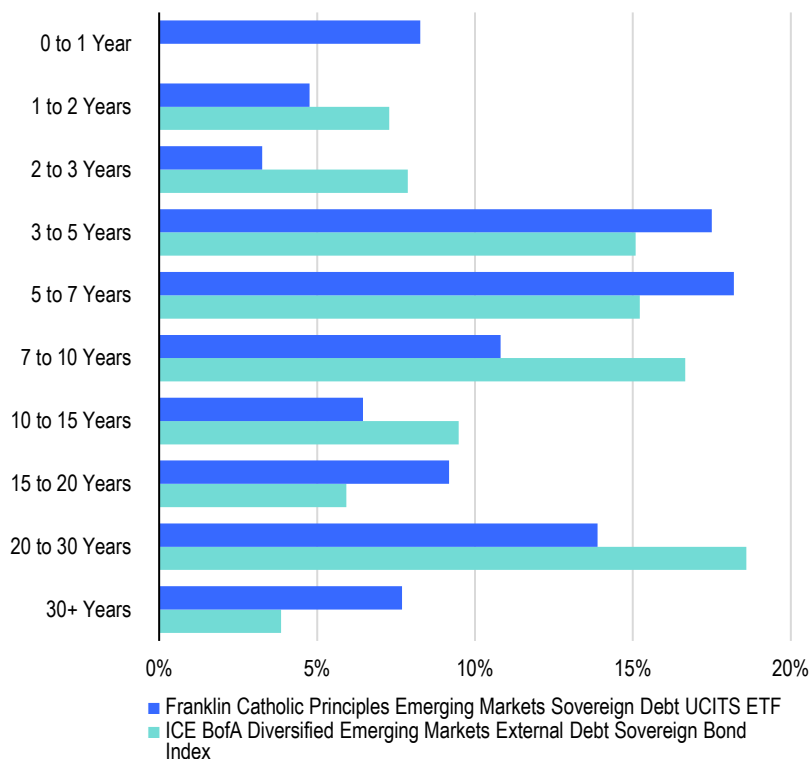

Weightings as % of Total. Percentage may not total 100% due to rounding. Information is historical and may not reflect current or future portfolio characteristics. All portfolio holdings are subject to change. Ratings shown are assigned by one or more Nationally Recognized Statistical Rating Organizations ('NRSRO'), such as Standard & Poor's, Moody's and Fitch. The ratings are an indication of an issuer's credit worthiness and typically range from AAA or Aaa (highest) to D (lowest). When ratings from all three agencies are available, the middle rating is used; when two are available, the lowest rating is used; and when only one is available, that rating is used. Foreign government bonds without a specific rating are assigned the country rating provided by an NRSRO, if available. The Not Rated category consists of rateable securities that have not been rated by an NRSRO. The Not Applicable category consists of nonrateable securities (e.g., equities). Cash includes equivalents, which may be rated.

For Professional Client Use Only. Not for distribution to Retail Clients.

Portfolio characteristics

Franklin Catholic Principles Emerging Markets Sovereign Debt UCITS ETF vs. ICE BofA Diversified Emerging Markets External Debt Sovereign Bond Index

As of 31.03.2024

| | Portfolio | Index |
|---------------------------|-----------|-----------|
| Average Credit Quality | BBB- | BBB- |
| Effective Duration | 7,34 Yrs | 6,99 Yrs |
| Average Weighted Maturity | 12,22 Yrs | 11,68 Yrs |
| Yield to Maturity | 5,55% | 6,76% |
| Yield to Worst | 5,55% | 6,76% |

Information is historical and may not reflect current or future portfolio characteristics. All portfolio holdings are subject to change.

The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies (or internal ratings for unrated bonds, cash and equivalents), is provided to indicate the average credit rating of the portfolio's underlying investments and generally ranges from AAA (highest) to D (lowest). For unrated bonds, cash and equivalents, ratings may be assigned based on the ratings of the issuer, the ratings of the underlying holdings of a pooled investment vehicle, or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of investments by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. The ACQ is provided for informational purposes only.

Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio.

Past performance is not an indicator or a guarantee of future performance.

For Professional Client Use Only. Not for distribution to Retail Clients.

All performance data shown is in the fund's base currency. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF. Individual investors may realise returns that are different to the NAV performance. Past performance does not predict future returns. The actual costs vary depending on the executing custodian. In addition, deposit costs may be incurred which could have a negative effect on the value. Please find out the costs due from the respective price lists from the processing/custodian bank. Changes in exchange rates could have positive or negative effects on this investment. Please visit <https://www.franklinresources.com/all-sites> for current performance and see the latest prospectus or supplement for further details. When performance for either the portfolio or its benchmark has been converted, different foreign exchange closing rates may be used between the portfolio and its benchmark.

The Fund's returns may increase or decrease as a result of changes to foreign exchange rates. **The value of shares in the Fund and income received from it can go down as well as up, and investors may not get back the full amount invested.**

Past performance is not an indicator or a guarantee of future performance.

| Sharpe Ratio | |
| Franklin Catholic Principles Emerging Markets Sovereign Debt UCITS ETF | 0,09 |

The base currency of a Fund determines the risk-free rate index used in calculating certain risk statistics on this page. A Fund that is based in USD uses the US T-Bill Index as the risk free rate return, a EUR-based Fund uses the Euro 3-Month T-Bill Index, a GBP-based Fund uses the UK Treasury Bills 3 Month Index, a JPY-based Fund uses the Japan Financing Bill 3 Month Index, and an AUD-based Fund uses the Australia T-Note 3 Month Index. When performance for either the portfolio or its benchmark has been converted, different foreign exchange closing rates may be used between the portfolio and its benchmark.

^^Measured against the ICE BofA Diversified Emerging Markets External Debt Sovereign Bond Index.

Management profile

John Beck

Senior Vice President
Director, Global Fixed Income
Franklin Templeton Fixed Income
Franklin Templeton
London, United Kingdom

John Beck is the senior vice president and director of Global Fixed Income for Franklin Templeton Fixed Income - Global Sovereign and Emerging Markets Debt in London, United Kingdom. Mr. Beck is responsible for coordinating the London-based fixed income teams that manage European Fixed Income and Emerging Markets Debt opportunities strategy. He also is the lead portfolio manager for Global Aggregate strategies as well as for major institutions including multinational pension funds and supranational organisations.

Mr. Beck has over 33 years of experience in the financial services industry. He is a member of the Fixed Income Research and Strategy Team (FIRST), which sets the broad fixed income strategy at Franklin Templeton.

Prior to his current role, Mr. Beck was the co-director of International Fixed Income for Franklin Templeton Fixed Income. He also was previously with Saudi International Bank and Fiduciary Trust. Mr. Beck joined Franklin Templeton in 1990 as the director of Global Fixed Income.

Mr. Beck holds an MA in philosophy, politics and economics (PPE) from Exeter College, Oxford University and an MSc in Behavioural Economics from City, University of London.

Glossary

Average Credit Quality: *The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness.*

Average Weighted Maturity: *An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings.*

Beta: *A measure of the magnitude of a portfolio's past share-price fluctuations in relation to the ups and downs of the overall market (or appropriate market index). The market (or index) is assigned a beta of 1.00, so a portfolio with a beta of 1.20 would have seen its share price rise or fall by 12% when the overall market rose or fell by 10%.*

Effective Duration: *A measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years. The weighted average duration of a fund reflects the effective duration of the underlying issues, based on the size of each holding.*

Information Ratio: *In investing terminology, the ratio of expected return to risk. Usually, this statistical technique is used to measure a manager's performance against a benchmark. This measure explicitly relates the degree by which an investment has beaten the benchmark to the consistency by which the investment has beaten the benchmark.*

Methodology: *The Methodology indicates whether an ETF is holding all index securities in the same weight as the index (i.e. Physical Replication) or whether an optimised subset of index securities is used (i.e. Optimised) in order to efficiently track index performance.*

Product Structure: *The Product Structure indicates whether an ETF is holding physical securities (i.e. Physical) or whether it is tracking the index performance using derivatives (swaps, i.e. Synthetic).*

Sharpe Ratio: *To calculate a Sharpe ratio, an asset's excess returns (its return in excess of the return generated by risk-free assets such as Treasury bills) are divided by the asset's standard deviation.*

Standard Deviation: *A measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.*

Tracking Error: *Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error.*

Yield to Maturity: *Yield to Maturity ('YTM') also known as the 'Gross Redemption Yield' or 'Redemption Yield'. The rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate.*

Glossary (continued)

Yield to Worst: *The yield to maturity if the worst possible bond repayment takes place. If market yields are higher than the coupon, the yield to worst would assume no prepayment. If market yields are below the coupon, the yield to worst would assume prepayment. In other words, yield to worst assumes that market yields are unchanged. Normally this value is not aggregated since it varies but if a weighted average value is used for a Fund then the figure will reflect the values of the underlying issues, based on the size of each holding.*

Important disclosures

This material is intended to be of general interest only and should not be construed as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy. It does not constitute legal or tax advice. Special risks are associated with foreign investing, including currency fluctuations, economic instability and political developments; investments in emerging markets involve heightened risks related to the same factors. To the extent the Fund focuses on particular countries, regions, industries, sectors or types of investment from time to time, it may be subject to greater risks of adverse developments in such areas at focus than a Fund that invests in a wider variety of countries, regions, industries, sectors or investments.

Franklin Templeton ICAV ("the ETF") investment returns and principal values will change with market conditions, and an investor may have a gain or a loss when they sell their shares. Please visit www.franklintempleton.it for the Franklin Templeton ICAV standardised and most recent month-end performance. There is no guarantee that any strategy will achieve its objective. Investment in Franklin Templeton ICAV is not riskless and investors can lose money.

All performance data shown is in the Fund's base currency. Performance data is based on the net asset value (NAV) of the ETF which may not be the same as the market price of the ETF.

Individual investors may realise returns that are different to the NAV performance. **Past performance is not an indicator or a guarantee of future performance.** The actual costs vary depending on the executing custodian. In addition, deposit costs may be incurred which could have a negative effect on the value. Please find out the costs due from the respective price lists from the processing/custodian bank. Changes in exchange rates could have positive or negative effects on this investment. Please visit www.franklintempleton.it for current performance and see the latest prospectus or supplement for further details. Information is historical and may not reflect current or future portfolio characteristics. All portfolio holdings are subject to change.

An investment in Franklin Templeton ICAV entails risks which are described in the latest prospectus or supplement and in the relevant Key Information Document.

The Fund's documents are available in English, German and French from your local website or can be requested via FT's European Facilities Service which is available at <https://www.eifs.lu/franklintempleton>. In addition, a Summary of Investor Rights is available from www.franklintempleton.lu/summary-of-investor-rights. The summary is available in English. Franklin Templeton ICAV is notified for marketing in multiple EU Member States under the UCITS Directive. Franklin Templeton ICAV can terminate such notifications for any share class and/or sub-fund at any time by using the process contained in Article 93a of the UCITS Directive.

For the avoidance of doubt, if you make a decision to invest, you will be buying units/shares in the Fund and will not be investing directly in the underlying assets of the Fund.

Franklin Templeton ICAV (domiciled outside of the U.S. or Canada) may not be directly or indirectly offered or sold to residents of the United States of America or Canada. ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.
